Abstract: An efficient direct solution scheme is presented to solve the finite element-boundary integral (FEBI) system for the analysis of open-region electromagnetic problems in half-space. Data-sparse representation based on hierarichal (\mathcal{H} -) matrix is employed to construct the direct solution framework. The FEBI system matrix is first represented to be an \mathcal{H} -matrix ...

Finite element analysis is a powerful technique for obtaining such approximate solutions with good accuracy. A small triangular element that encloses a finite-sized subdomain of the area of interest is shown in Figure 1.1b. That this element is not a differential element of size $dx \times dy$ makes this a finite element.
