This course builds on elementary linear algebra and in it we derive, describe and analyse a number of widely used constructive methods (algorithms) for various problems involving matrices. Numerical Methods for solving linear systems of equations, computing eigenvalues and singular values and various related problems involving matrices are the main focus of this course.

Numerical Linear Algebra A Solution Manual

This course concerns the numerical solution of linear systems, linear least squares problems (best approximate solution for an inconsistent linear system), eigenvalue and singular value problems. We will introduce numerical algorithms for the solution of these problems on a computer, and analyze their efficiency and accuracy in the presence of rounding errors.

Compared with some other books, this is true. However, the prerequisite for this book is a sound understanding of linear algebra. Without that, you will need to be a math genius to find this book easy to read. So, this is an excellent book for your (at least my) first exposure to numerical linear algebra.
